Special Porcelain Parts

WE MAINTAIN a fully equipped department for the production of porcelain specialties, manufactured to the specifications of our trade.

MUCH DEPENDS on the accuracy of the Dies and Tools to be used and it is with great pride that we announce the average term of employment per man in our Machine Shops as being Ten Years. Both shops are superintended by executives who have served Fifteen or more consecutive years in like capacity.

WE ARE, therefore, capably prepared to offer an exceptionally valuable service to those Buyers who demand the Best and have an appreciation for Precision.

PROPOSALS can be furnished promptly upon receipt of blue prints, sketch, model or sample

A Word In Advance

PORCELAIN

All designs except tubes are manufactured in our plants by the Dry Process. Best grade materials and skilled workmanship as well as experience insure the highest standard product in Electrical Porcelain by which "Thomas Quality" has been commercially recognized for well over 40 years. Look for the Thomas trade mark.

MANUFACTURING FACILITIES

We operate two of the largest electrical porcelain plants in America. The mother plant is under the direct supervision of the Executive Offices at East Liverpool while a subsidiary plant of equal capacity is located at Lisbon, Ohio.

Shipping facilities are of the best, including three railroads and three river-boat lines.

STANDARD GLAZE

Standard clear white glaze is furnished on all designs except those listed on Pages 25, 26 and all but Telephone Cleats on Page 15 which are furnished with regular brown glaze. These, however, can also be supplied in white glaze at a figure 10% in advance of Net Prices.

STANDARD PACKAGE

The Barrel is the standard package as adopted by us. Aside from being the most economic form of container the barrel more closely approximates in content the unit by which distributor's prefer to order and stock. It also seems preferable on account of facility and ease in handling.

A standard package cannot be made up of assorted pieces or sizes. The quantities designated as comprising a Standard Package are approximately correct but not guaranteed.

PACKAGE DIMENSIONS

Our Standard Barrel is 30 inches (762 mm.) high, has a bilge diameter of 24 inches (609 mm.) and has a 19 $\frac{1}{8}$ inch (486 mm.) head. This barrel weighs approximately 25 lbs. (11.4 kgs.), metal strappings, etc., necessary for Export Shipments adding about 5 lbs. (2.3 kgs.) The weights given herein are approximately correct but not guaranteed.

PACKAGE VOLUME

Figures for the item of Package Volume should be accurate since Export Shipments at steamer are closely checked in this respect.

The regular formula for calculating the volume of a barrel, although correct for the single package is misleading in quantity lots, since both the head and bilge diameters and the cylindrical shape are considered. The Actual Package Volume of our standard barrel is 6.9 cu. ft. (.195 cu. m.) as figured by the above method.

However, the Packed Volume as it should be estimated by the Exporter should consider the actual space taken up by the package in the hold of the vessel, remembering that barrels will not nest closely together except at the bilge, or in other words a box having a square diameter the equivalent to the bilge diameter of the barrel and being of equal height would consume no more space in quantities than would the barrel. The actual space taken up by our standard barrel (nested in lots) is 10 cu. ft. (.283 cu. m.) as a maximum.

PACKAGE CHARGES

When porcelains are packed in barrels, a charge will be made for each barrel.

When porcelains are packed in boxes or kegs each containing 500 pairs or pieces, a charge will be made for each box or keg.

When porcelains are packed in boxes or kegs each containing 1000 pairs or pieces a charge will be made for each box or keg.

When porcelains are packed in paper boxes, a charge will be made for each box.

All package charges are Net and are subject to no discounts from the invoice price.

EXTRA CHARGES

Due to the extreme cost in handling small orders in our plants, the following conditions are effective.

When order amounts to less than \$5.00 there will be a net advance of 25% plus regular packing charges.

When order amounts to more than \$5.00 and less than Standard Package there will be a net advance of 10% plus regular packing charges.

The minimum charge on any single order will be \$1.00 plus regular packing charges.

NATIONAL CODE MATERIALS

With this edition we desire to announce the withdrawal of all Old Code designs. For economical reasons as well as a means of eliminating hazardous designs it has been considered best to concentrate our efforts in the production of such materials as will pass Code inspection. We appreciate the co-operative spirit manifest by the trade in response to our initial announcement to this effect and trust that the benefits will be mutual.

ALL PRICES subject to change without notice.

ASSEMBLED WIRING KNOBS

The Assembled Wiring Knob needs little or no introduction since it has been so favorably accepted as the Standard Economic Wire Supporting Fixture. Although quite an inexpensive article, it is most desirable for its time saving qualities, its compactness, efficiency and appearance.

NAIL ASSEMBLED KNOB
Code Word **IDCIK**

Assembled Knobs

Nail Assembled . . . \$70.00

Screw Assembled . . 90.00

For 12 to 14 Wire

SCREW ASSEMBLED KNOB
Code Word—**IDCIN**

The Thomas Nail Assembled Knob is designed to stand the real test of service. It is fool-proof. Every member used in its make-up is of the best. It is so constructed as to withstand the accidental or mis-directed blow of the hammer or other sound object; when installed they will stay put; will clamp the wire and grip it tightly although the rounded edges prevent the porcelain from cutting into the cable and shearing it off. This Knob can be installed in any position with ease and the nail may be driven home regardless of the position of the rotary cap with respect to its base. The extremely heavy leather washer under the head of the nail permits of excessive pounding without fear of shattering the porcelain. The ten penny bright steel nails used are carefully selected from stout steel stock. A blow—and the nail bites in. No bending or breaking but ever sturdy, straight and true. Standard packing for both Nail and Screw Assembled Knobs is as follows:

The First High Voltage Porcelain Insulator

IT WAS our proud heritage to develop and produce the first all-porcelain Insulator in America to be used on High Voltage Systems. Since then, a quarter century ago, we have manufactured a large share of the High Tension Insulators to be used throughout the world. Our constant progress is our greatest assurance of the Dependability of our Product. Your Inquiries are respectfully solicited

The
R. THOMAS & SONS CO.
